

# HOW TO TYPESET EQUATIONS IN L<sup>A</sup>T<sub>E</sub>X

Stefan M. Moser

29 September 2017

Version 4.6

## Contents

<b>1</b>	<b>Introduction</b>	<b>2</b>
<b>2</b>	<b>Single Equations: <code>equation</code></b>	<b>3</b>
<b>3</b>	<b>Single Equations that are Too Long: <code>multline</code></b>	<b>4</b>
3.1	Case 1: The expression is not an equation . . . . .	6
3.2	Case 2: Additional comment . . . . .	6
3.3	Case 3: LHS too long — RHS too short . . . . .	6
3.4	Case 4: A term on the RHS should not be split . . . . .	7
<b>4</b>	<b>Multiple Equations: <code>IEEEeqnarray</code></b>	<b>7</b>
4.1	Problems with traditional commands . . . . .	7
4.2	Solution: basic usage of <code>IEEEeqnarray</code> . . . . .	9
4.3	A remark about consistency . . . . .	10
4.4	Using <code>IEEEeqnarray</code> for all situations . . . . .	12
<b>5</b>	<b>More Details about <code>IEEEeqnarray</code></b>	<b>12</b>
5.1	Shift to the left: <code>IEEEeqnarraynumspace</code> . . . . .	12
5.2	First line too long: <code>IEEEeqnarraymulticol</code> . . . . .	13
5.3	Line-break: unary versus binary operators . . . . .	14
5.4	Equation numbers and subnumbers . . . . .	16
5.5	Page-breaks inside of <code>IEEEeqnarray</code> . . . . .	20
<b>6</b>	<b>Advanced Typesetting</b>	<b>20</b>
6.1	Aligning several separate equation arrays . . . . .	20
6.2	<code>IEEEeqnarraybox</code> : general tables and arrays . . . . .	21
6.3	Case distinctions . . . . .	23
6.4	Grouping numbered equations with a bracket . . . . .	24
6.5	Matrices . . . . .	28
6.6	Adapting the size of brackets . . . . .	28
6.7	Framed equations . . . . .	31
6.8	Fancy frames . . . . .	34
6.9	Putting the QED correctly: <code>proof</code> . . . . .	35
6.10	Putting the QED correctly: <code>IEEEproof</code> . . . . .	38
